

# Social Housing Building

## Picket Infilled Balustrading

BEFORE

AFTER

## PROJECT OVERVIEW

### Background

Our brief for this Local Authority project was to design and install new replacement mild steel picket infilled balustrading that would not only conform to all current building regulations but would also look aesthetically pleasing and give the blocks a more modern feel.

### Solution Provided

The design from WC Evans & Sons Ltd featured fully galvanised and powder coated balustrading, which enabled the client to achieve a long-term, maintenance free solution. In addition our in-house experts provided a full design service on this project from start to finish complete with all necessary structural calculations.

The end result is a stunning improvement to the quality and aesthetic appearance of the building, and another very happy client.
